

1959

University Institute of Medical Genetics.
V. Agatan 24, Uppsala, Sweden.

LONDON - 8 June.

Just back from Conferences
Raymont et al., and resting
here briefly before setting off
for home. Sir M. in splendid form
as is selection theory - now at stage
"why what else could anyone ever have
suggested" except for details such as
the identity and number of mutable sites
per cell. Sir M. should be given better &
the discrepancy of *Colin* becomes more pro-
ziling. Perhaps the trick is prolonged, in the
tensive & systemic immunization? Stocker
will help us make some large scale
of flagellins. 'til August
Dosh & Collier.
